PREPARATION STATEMENT

While we may have individual products or ingredients that do not contain a specific allergen, we do not have the ability to segregate those products during normal kitchen processes. As a result, such products could come into contact with an ingredient that might otherwise cause an allergic reaction.

- During preparation, we do not use separate fryers for cooking. Because of this, there is the potential for allergen crossover with any of our fried items.
- Our Traditional Wings and Boneless Wings are fried and sauced in the same containers.
- Beef shortening is used to fry products.
- We grill many items that contain allergens, and cross contact with other allergens may occur during the cooking process.

PRINTED INFORMATION IS VALID- 2/20/17 - 5/1/17

The following information is designed to assist guests with food allergies.

PLEASE NOTE: Because of our reliance on suppliers for accurate information, the shared cooking and preparation areas in our kitchens, and the above-mentioned kitchen procedures involved in cooking, we cannot eliminate the risk of cross-contamination or guarantee that any item is free of any allergen. The information below details which of the most common allergens are present in each menu item. If you have questions about this information, please ask to speak to a Restaurant Manager. If you have any questions about food allergies or sensitivities, we recommend that you contact your medical professional.
